

# Rodrigo Nahuel Castillo

AI Agent Developer | Multi-Agent Systems · MCP · LLMs

Buenos Aires, Argentina | castillorod.n@gmail.com | +54 11 5323 4190 | linkedin.com/in/rodrigoncastillo | portfolio-rodrigo-castillo.vercel.app

## PROFESSIONAL SUMMARY

AI Agent Developer focused on designing, shipping, and validating LLM-based conversational agents. I specialize in **multi-agent architecture**, **prompt engineering**, and **MCP** tooling, and bring a QA Automation mindset to every release. Beyond building agents, I redesign how teams work so AI becomes part of their processes.

## EXPERIENCE

### Semi-Senior AI Agent Developer

Botmaker

April 2025 – Present

Buenos Aires, Argentina

- Planned and redesigned the area's workflow, moving from a traditional process to an **AI-assisted** one: **sped up the area's work by 30% to 40%** and improved delivery times, quality, efficiency, and client relationships. The model runs on reusable skills the team now applies across other clients' projects.
- Led the migration of a large-scale government conversational assistant (WhatsApp and web) from static flows to a **multi-agent architecture**: consolidated **thousands of scattered intents** into an orchestrator and domain-specialized agents, and delivered the full migration plan in just 1 month.
- Took the orchestrator and specialized agents to production and sustained their iteration with the client once live, achieving gains in **containment, resolution, errors, and response times**.
- Designed the prompt architecture and a style guide that unified the tone of the entire conversational ecosystem, and implemented accessibility improvements for screen readers.
- Safeguarded the quality of every release with Python test sets over **hundreds of real phrases**: measured per-intent recall, achieved **0% intent collisions**, and documented model selection by comparing LLMs.
- Expanded the agents' reach with **MCP** tools in TypeScript (semantic search, hierarchical queries) and automated knowledge base creation with Python pipelines; also added agent monitoring and automated internal HR processes with WhatsApp Flows.
- Audited the bot's complete variable inventory and found that **about 27% were unused**; the formal report to the agency's authorities enabled technical debt cleanup.

### Junior QA Tester / Testing Analyst

QActions Group

Sep 2024 – Mar 2025

Buenos Aires, Argentina

- Automated regression suites with **Tricentis Tosca** on critical systems, shortening the validation cycle of each release.
- Detected and documented defects across SDLC stages, following up until resolution under Agile and Scrum.
- Identified security and performance flaws in an enterprise client's critical tool and proposed its redesign into a deterministic solution.

## EDUCATION

### Computer Science Engineering

National University of La Matanza (UNLAM)

2022 – Present · 3rd year

### Electronics Technician

Technical Secondary School No. 6

2015 – 2021

## SKILLS

**AI & Agents:** multi-agent architecture, agentic workflows, prompt engineering, tool use / MCP, RAG, knowledge bases, agent evaluation (evals), intent and entity design, Botmaker, n8n

**LLMs:** Anthropic (Claude), OpenAI (GPT), Google Gemini

**Languages:** Python, TypeScript, JavaScript / Node.js, C, HTML, CSS

**Backend & Integrations:** REST APIs, webhooks, WhatsApp Flows, Google Apps Script

**Data & Cloud:** SQL, MongoDB, Google Cloud Platform, Git / GitHub / GitLab

**Spoken languages:** Spanish (native), English (B1–B2)
